

## PULSE REPORTING

Pulse Reporting is a statistics generator based on Pulse data. It allows you to choose between different reports (statistic templates) available according to your company type. These reports can be generated live or scheduled.

[illegible]

- 1 Show / hide the left menu.
- 2 Show the reports list.
- 3 Show the favorites list.
- 4 In the reports list, you can expand / collapse main categories to see the available reports. Once you select a report in the list, it is highlighted in red and automatically update the right part of the display with the report description and configuration.
- 5 The report description part shows a brief description of the selected reports as well as a graphical example. If you click on the thumbnail, it displays the example on full screen.

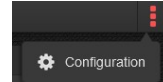

- 6 The report configuration part allows you to select different parameters or filter in the reports. For example, you can select the period of data to be processed or filter the machines you are interested in.

Each parameters has a help icon that gives a description of the item.

- 7 The report action part validates your report selection and his configuration, to display directly the result in a new browser tab with the  button or to save everything in a favorite for later use with .

- 8 The 3 dots at the top right show / hide the global configuration.

You can changes the browser theme from light to dark or choose to open the reports in the current or in a new tab.
